OPEN						

The Cayman Islands Government, through the Department of Customs & Border Control, is seeking information from qualified vendors to procure an advanced electronic border management system. This system is intended to enhance the efficiency and effectiveness of border management operations, including passport control, trade and revenue collection, and intelligence gathering.

The primary objectives of this RFI are to:

1. Identify potential vendors who can provide a comprehensive electronic border management system.
 2. Gather information on the capabilities, features, and integration options of available systems.
 3. Understand the potential for reporting and analytical tools that can seamlessly tie into existing local information systems.
 4. Explore innovative solutions that can enhance our border control processes while ensuring compliance with international standards.
