 - ii. The meter shall register energy even when the return path of the load current is not terminated back at the meter and in such a case the circuit shall be completed through the earth. In the case of metallic bodies, the earth terminal shall be brought out and provided on the outside of the case.
 - iii. The meter shall operate accurately even when incoming mains is connected to outgoing terminals and the load is connected to incoming terminals. LED or LCD indication shall be provided on the meter wherever such tampering occurs.
 - iv. Three Phase meters shall have anti-tampering features like Phase sequence reversal, current reversal, missing potential, and missing neutral.

 - vi. In the case of whole current meters and LV-CT-operated meters, the meter shall be capable of recording energy correctly even if input and output terminals are interchanged.
 - vii. The registration must occur whether the input phase or neutral wire is connected properly or they are interchanged at the input terminals.
 - viii. The meter shall be factory calibrated and shall be sealed suitably before dispatch.
 - ix. Neutral missing feature: Meter will register energy even if neutral is disconnected from both ends and the load is earthed in a single phase.
